SUNDRIES

SOLVENTS AND GENERAL ADDITIVES

The following is a brief summary of sundry solvents and general additives available from Australian Specialty Inks for use in their entire product range.

For detailed information on any of the products listed here please contact Australian Specialty Inks directly on 02 9603 3399 or, if preferred, your nearest distributor of our products.

When ordering please ensure to quote the product name and part number for the particular product required.

Product Description Anti-Bubble Solution

Part Number: FSU4

An effective surface tension release agent to eliminate bubbling of the finished print. Additions of 2.0 to 5.0% by weight as required.

Product Description Anti-Crater Compound

Part Number: FSU209

This product is a very strong oil based flow additive material and would normally be used only after the use of Anti-Bubble Solution SU4 had been tried without success. Additions of between 0.50 and 1.00% will normally be ample to produce an even smooth print result.

WARNING.

Excessive use of this product can cause additional problems in the form of fish eyes and render the finished print to a non-overprintable state.

Product Description: Universal Sharp Print Compound Part Number: FSU178

This product is basically a slow evaporation gelled solvent, very well suited where a sharp detail reproduction is required. The use of the product should be limited to approximately 10%, as it will slightly reduce overall gloss and drying time.

Website: www.austspecialtyinks.com.au

Product Description: Original Matt Paste

Part Number: FSU5483

This product is a paste version of ASI product Flattening Powder FSU5619.

The product is used to reduce gloss levels to a desired level, normal use of this product would be in the range of 1 to 10% depending on the gloss level required. As a guide additions of 1% would produce a Satin finish where additions in the area of 10% will produce flat results.

Product Description: Anti-Static Solution Part Number FSU5208

A very useful solution to have on hand when general production conditions produce conducive static electricity print reproduction problems.

Additions of this product should be limited to no more than 5%.

Product Description: Universal Screenwash

Part Number: FSU5112

A very effective and relatively cheap general-purpose screen wash supplied in 1, 5 and 20lt packs.

Product Description: Alcohol Wash

Part Number: FSU12

Alcohol based cleaning solution used to clean contamination from substrates prior to printing. Ensure the solution has completely evaporated from surface before printing.

Product Description: Etch Solvent

Part Number: FSU138

This product is supplied to assist adhesion when printing on particularly hard substrates such as styrene and ABS type materials.

We also stock the following basic solvents for general use.

Product Description	ASI Part Number
Acetone	FSU57
M.E.K	FSU120
M.I.B.K	FSU123
Toluene	FSU54
Mineral Turps	FSU1636

It is recommended that the user consult the MSDS for products listed in this Product Information sheet before use.
